THE BEST CHOICE FOR EVERY FINE SCREENING NEED

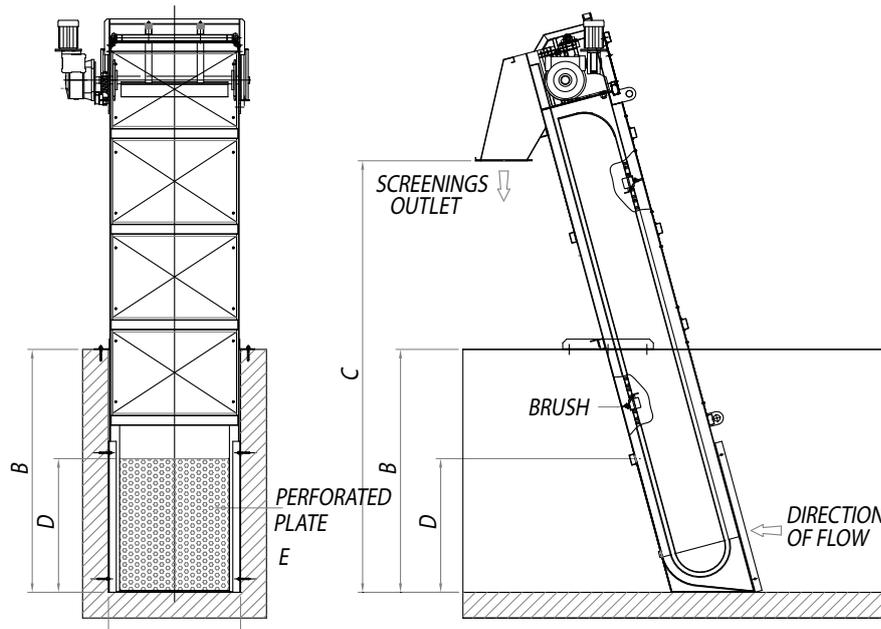

GVS Sub-vertical Mechanical Perforated Screens are used for fine screening in both municipal and industrial waste water plants.

Waste water flows into the upstream end of the unit where screenings are captured on a perforated plate filter.

Chain-driven brushes and wiper blades clean the perforated plate filter conveying at the same time solids to the discharge point.

Material is removed from the rakes by a wiper and discharged into a dumpster, conveyor or compactor.
