COMPACT AND STURDY: THE PERFECT CHOICE

SGR Externally Fed Drum Screens are used for fine screening of sewage from both industrial and municipal purification plants. Alternatively, they are used for screening of process water from industrial processing plants.

Waste water is conveyed through a distributor onto the external surface of the drum screen.

The side sealing consists of nylon sliding blocks. Solids are retained on the external surface of the drum screen and subsequently discharged. The drum is cleaned by means of a brass plate.

After passing through the inside of the drum screen, clean water is collected on the bottom of the tank and discharged through a nozzle. Rotation of the filter occurs by coupling connection to a gear reducer mounted at the end of the drum. At the opposite end a cleaning system is installed.

Overall Dimensions

MODEL	FILTERING DRUM DIAMETER ØA [mm]	TOTAL WIDTH B [mm]	TOTAL LENGTH C [mm]	TOTAL HEIGHT D [mm]	INLET [DN] - PN 10	OUTLET [DN] - PN 10	DRIVE POWER [kW]
SGR 4040	400	945	1,140	1,135	100	150	0.25
SGR 6060	600	1,210	1,430	1,500	200	250	0.37
SGR 6090	600	1,510	1,430	1,500	200	250	0.37
SGR 6150	600	2,140	1,430	1,500	250	300	0.55
SGR 6180	600	2,440	1,430	1,500	300	400	0.55
SGR 9300	900	3,830	2,080	1,570	no. 2 x 350	op 500 x 2,000	1.10

Benefits

- ✓ Compact design, easy to install in narrow spaces / aerial channels
- ✓ High flow rates
- ✓ Self-cleaning
- ✓ User-friendly
- ✓ Low energy consumption and limited maintenance

Technical Features

- Slot width: 0.25 ~ 2.50 mm
- Wedge wire filter with so-called “slot zero” to ensure drum resistance
- Screen in 304 L / 316 L SS

Zero Slot

Cleaning Blade

By-pass (option)

OPENING SIZE [mm]	PEAK FLOW RATE WITHOUT OVERFLOW [m³/h]
